Integration Partner Overview

Totara provides a comprehensive, data-driven solution for sales readiness and enablement and professional training. Its purpose-built applications, proven methodologies, and best practices are designed to drive effective sales onboarding and ongoing readiness. With Totara, company leaders and sellers can continually assess, diagnose, and develop the knowledge, skills, and behaviors required to effectively engage customers and drive growth.

Requirements The LinkedIn Learning and Totara integration involves the following requirements:

· An active Totara LMS instance (TXP v15 or above)

· An active LinkedIn Learning account

· Admin access to LinkedIn Learning

· Admin privileges to your Totara LMS instance (TXP v15 or above)

You can enable this integration only for organizations that have a production or a test implementation of Totara TXP v15 or above.

Benefits of Integration

- Enables learners to **access their LinkedIn Learning content** directly within their LMS
- **Reduces manual effort by admins** to upload courses from LinkedIn Learning to their LMS
- Ensures learners always have **the latest LinkedIn Learning content** as soon as it's released
- All learner activities are **recorded directly and automatically** into their LMS

Capabilities Included with Integration

Authentication	Content		Reporting	
LMS as SAML IdP (i.e., as SSO)	Automatic Content Sync	Language Support	xAPI	AICC Reporting
No	Yes	All	Yes	No

- Automatic Content Sync - Your LMS will automatically receive new LinkedIn Learning content within 24 hours of its release. All content titles and descriptions are indexed to accommodate keyword searches and support efficient discoverability.
- Language Support - LinkedIn Learning has two different language license types: 1) *English* - only English content from LinkedIn Learning is supported for this LMS partner, and 2) *All-languages* - all available language content from LinkedIn Learning is supported.
- xAPI - Your LMS can serve as a single source of truth for LMS-initiated and non-LMS initiated learner activity tracking and reporting. xAPI reporting includes completion status with more data points expected in the future. LinkedIn will send completion events to the LMS regardless of where the content is launched (from LinkedIn, LinkedIn Learning's mobile app, etc.).

Support

To enable the integration, you can contact Totara Help Desk. You must register as a Totara member to receive technical support. In the scenario you are unable to access the Help Desk, please review the Totara Support documentation.
