

LinkedIn Admin Center

All the features for **managing licenses, roles, and permissions** from Account Center and People Management are now available in LinkedIn Admin Center

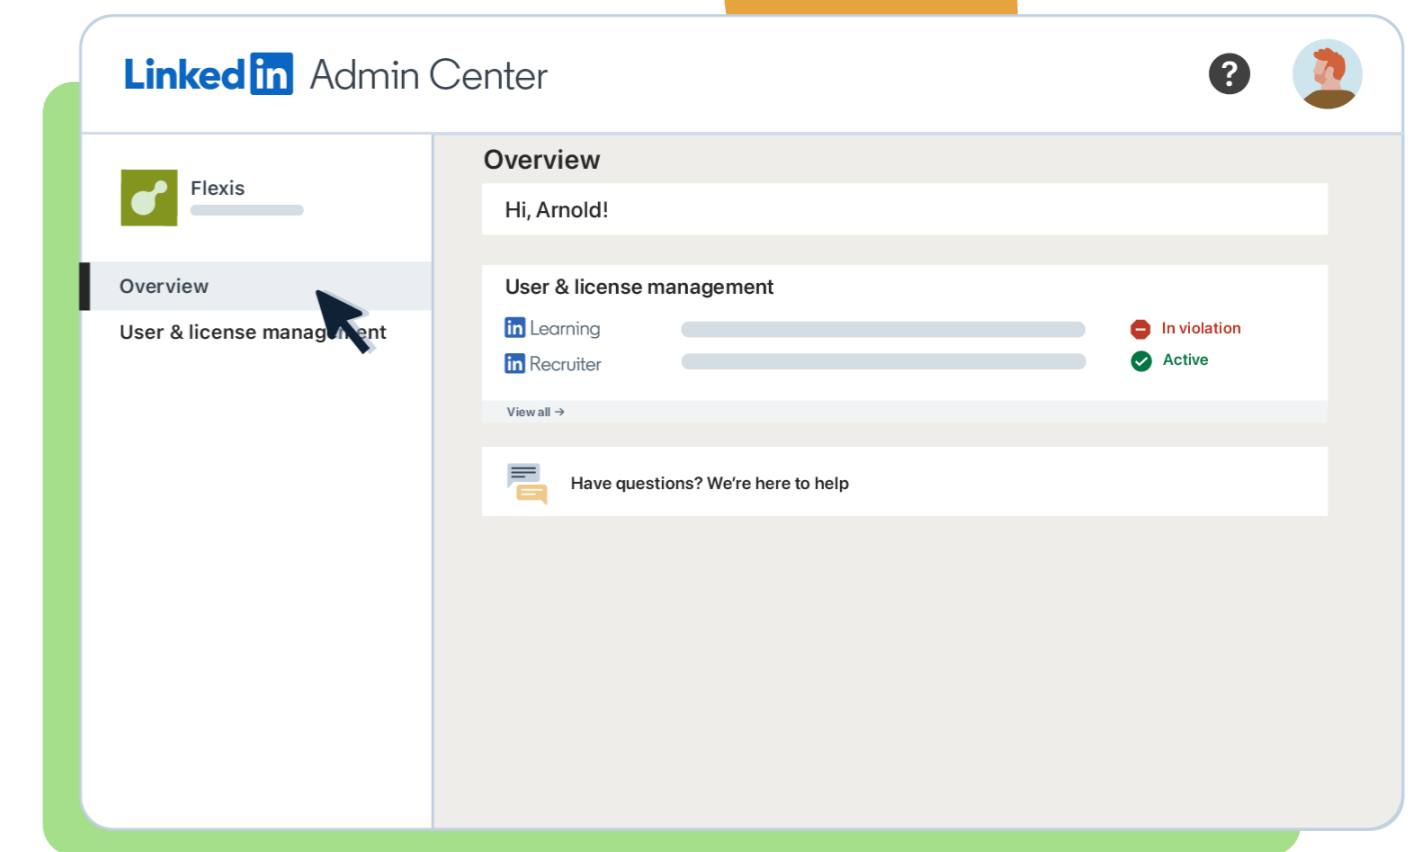

Quickly provide the right level of access to teammates.

Get control and visibility into your users' permissions at scale to ensure teammates have the right level of access. Assign user roles, licenses, and permissions in bulk. Invite teammates even if they've only linked their personal email addresses to their profiles, and increase company and user security with optional single sign-on (SSO) to get real-time access control.

Increase adoption with usage reports and license management.

Base your adoption strategy on real insights and tools for follow-through. View metrics on product usage so you can understand user behavior and pain points, send teammates reminders to activate their licenses, and manage user custom attributes such as InMail limits, job slots, and bulk messaging.

Leverage new dashboard pages for improved switching between products.

Manage multiple LinkedIn products with the new Overview tab and view user and license information across dashboards. Get a holistic view of your users and licenses, and with just a click, access functionality for a specific product.
